

We are proud to present our new packaging line for processed cheese. Sapal Albatros integrates the latest technology to help you produce more, with a better quality and more efficiently.

Go further with **Sapal Albatros**, the new-generation packaging line for **processed cheese**.

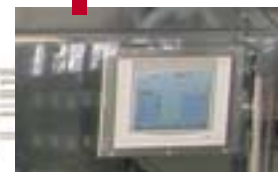

It is **efficient** and improves your productivity

Sapal Albatros produces up to 300 portions per minute. Its new inline design permits a minimum of transfers resulting in increased speed, reduced downtime and less floor space.

It is **user-friendly** and makes your job easier

A very quiet machine, Sapal Albatros has control elements located all along the line. A touch screen allows easy setting of the production parameters, e.g. the dosing volume of portions.

It is **flexible** and adapts to your needs

Changeovers to various sizes and shapes are easy and can be carried out very fast. For example, changing from a triangular to a square portion takes a few hours only! Moreover, the Sapal Albatros dosing unit handles all kinds of textures with a very high dosing accuracy.

It is **hygienic** and keeps your products safe

Oil- and grease-free, Sapal Albatros is protected by large transparent guards. Cantilever designed, it keeps all drives outside of the product flow. It is built in stainless materials and thus wash-down; in addition, its dosing unit is CIP.

Please feel free to contact us. We will be delighted to tell you more about Sapal Albatros.
