

What does Bosch do to protect the aroma?

1
oxygen reduction
via vacuum

2
oxygen reduction
via inert-gas flushing

3
oxygen reduction
via inert-gas flushing
and partial vacuum

outside
valve

inside
valve

One kilogram of roasted coffee beans emits around six liters of roasting gasses within five weeks.

Advantages of Bosch's coffee packaging solutions:

Cost savings as no interim storage is necessary since the application of valves enables direct packaging

Application of valves and three product protection methods for reliable aroma protection

Long product shelf life due to lowest residual oxygen rates (<1%)

Facts about Bosch Packaging Technology

- ✓ Bosch has over 50 years experience in aroma protection.
- ✓ Bosch is represented in over 165 countries with packaging machines.
- ✓ Bosch offers complete coffee packaging solutions including valves, the respective applicators and package makers.
